

## KNOX BOX PROGRAM

### KNOX BOX

Knox Box is a company that makes special security access equipment. This equipment ranges from padlocks to radio activated key boxes located on fire and EMS apparatus. The type of Knox Box most commonly used is a key box. Key boxes are located at a property, whether commercial or residential and contain keys and sometimes floor plans for the structure.

you ask?**

# KNOX BOX PROGRAM

---

## Knox Box

These boxes are typically located near the entrance of a property. These key boxes can be accessed by the Fire/EMS Department by using a specially cut key allowing entry to the building, in an emergency, without having to wait for a key holder and without destroying any windows or doors. Knox Boxes can save lives and property by allowing quick and secure access.

## Key Boxes on Fire/EMS Apparatus

Who has access to the special Knox Box keys? The Knox Box keys are available to Fire and EMS providers throughout the County in locked boxes with extremely limited access on an “as needed” basis only. This provides an extra level of security for the system and your property.

*Knox Gate Switch*

## Knox Gate Key Switch

Another useful application from Knox Box is the gate key switch. This device would allow the Fire/EMS Department to gain access to your property, and therefore your residence or business, without having to wait for a key holder or having to push or pull your electric security gate out of the way.

For more information about this program or how your residence or business can order a Knox Box, please contact:
